LIKE ELECTRIC **BUTTON ON TOES**

TELLS WHY A CORN IS SO PAIN-FUL AND SAYS CUTTING MAKES THEM GROW.

Press an electric button and you form a contact with a live wire which rings the bell. When your shoes press against your corn it pushes its sharp roots down upon a sensitive nerve and you get a shock of pain.

Instead of trimming your corns, which merely makes them grow, just step into any drug store and ask for a quiter of an ounce of freezone. This will cost very little but is sufficient to rimove every hard or soft corn or caling from one's feet. A few drops apply directly upon a tender, aching the step in the soreness instantly, and soon the corn shrivels up so it lifts right out, root and all, without pain. This drug is harmless and never infames or even inflates the surroundit tissue or skin.
